LinkedIn | Github | Portfolio
Santa Fe, NM

Professional Summary:

- Highly skilled **Java Full Stack Enginner** with approximately 4 years of experience designing, developing, and maintaining enterprise applications using Java, Spring Boot, React.js, Python, SQL, RESTful APIs, and cloud-native technologies.
- Strong foundation in **Data Structures, Algorithms, Advanced Algorithms, Object-Oriented Programming, System Design, Distributed Systems, and Software Architecture**, applying engineering principles to build efficient, scalable, secure, and maintainable applications.
- Experienced in developing backend microservices, integrating enterprise APIs, implementing database-driven business logic, and supporting event-driven architectures and distributed application workflows.
- Knowledge of **Cybersecurity, Secure Software Development, API Security, Authentication, Authorization, OAuth2, JWT, Role-Based Access Control (RBAC), and secure-by-design principles** for enterprise applications.
- Familiar with AWS cloud infrastructure, Terraform, Docker, Kubernetes, CI/CD automation, and cloud deployment practices supporting reliable software delivery.
- Experienced in troubleshooting application issues, analyzing logs, optimizing SQL queries, identifying root causes, and improving existing application workflows.
- Actively developing expertise in **Generative AI, Agentic AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangChain, Prompt Engineering, AI Tool Calling, and Agent Orchestration** through independent technical learning.
- Knowledge of AI-assisted software engineering practices, including reviewing generated code for correctness, security vulnerabilities, maintainability, and architectural consistency.
- Strong understanding of Agile software development, software testing, code reviews, technical documentation, and collaboration with cross-functional engineering teams.
- Interested in building intelligent, cloud-native software solutions that combine AI-driven automation, scalable system design, and cybersecurity principles.

TOOLS AND TECHNOLOGIES:

Programming Languages: Java 11/17, Python, JavaScript, TypeScript, SQL, PL/SQL
Computer Science Fundamentals: Data Structures, Algorithms, Advanced Algorithms, Object-Oriented Programming, Design Patterns, Problem Solving, Time and Space Complexity
System Design & Architecture: High-Level Design (HLD), Low-Level Design (LLD), Distributed Systems, Microservices Architecture, RESTful APIs, Event-Driven Architecture, API Integration, Database Design, Scalability, Reliability
Backend Technologies: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Cloud, REST APIs
Frontend Technologies: React.js, Angular, HTML5, CSS3, JavaScript, TypeScript
Cloud & Infrastructure: AWS (EC2, S3, Lambda, ECS, EKS, CloudWatch), Terraform, Docker, Kubernetes, Helm
CI/CD & Development Tools: Git, GitHub Actions, Jenkins, Maven, GitHub, Jira, SonarQube
Databases: PostgreSQL, Oracle, MySQL, MongoDB, SQL Query Optimization, Data Modeling
Messaging & Integration: Apache Kafka, RabbitMQ, AWS SQS, Asynchronous Processing, Event-Driven Workflows
Cybersecurity: OAuth2, JWT, RBAC, IAM, Authentication, Authorization, API Security, Secure Coding, Vulnerability Awareness
AI & Agentic Engineering Knowledge: Generative AI, LLMs, LangChain Fundamentals, RAG, Prompt Engineering, Tool Calling, Agent Orchestration, Human-in-the-Loop Validation, AI-Generated Code Review

PROFESSIONAL EXPERIENCE:

Deloitte — Full Stack Developer, United States **Nov 2025 – Present**
Role: Java Full Stack Developer

Functional Role Details:

- Develop, enhance, and maintain enterprise application components using **Java 17, Spring Boot, React.js, TypeScript, and RESTful APIs**, supporting ASPEN's eligibility determination, benefits processing, and case management workflows.
- Work on **data collection, Eligibility Determination Groups (EDG), Eligibility Determination and Benefit Calculation (EDBC), and correspondence modules**, implementing business-rule changes and application enhancements based on program requirements.

- Apply **data structures, advanced algorithms, object-oriented programming, design patterns, and system design principles** to develop scalable, reusable, and maintainable application components.
- Develop and integrate RESTful APIs to facilitate secure communication between ASPEN application services, databases, and external government systems.
- Work extensively with **Oracle SQL and PL/SQL**, developing complex queries, stored procedures, and data validation scripts to support eligibility processing, reporting, and production troubleshooting.
- Investigate and resolve production issues involving eligibility determination, projected release dates, facility records, duplicate records, status indicators, batch processing, and inconsistent database transactions.
- Develop and execute controlled database correction scripts while maintaining data integrity, audit history, transaction consistency, and compliance requirements.
- Support AWS-based application infrastructure using services such as **EC2, S3, Lambda, CloudWatch, and containerized environments**, where applicable to assigned development responsibilities. Explore **Generative AI, Large Language Models (LLMs), LangChain, Retrieval-Augmented Generation (RAG), and Agentic AI architectures** for enterprise application automation.
- Study **AI agent orchestration, tool calling, prompt engineering, and human-in-the-loop workflows**, focusing on secure integration with backend APIs and enterprise systems.
- Develop familiarity with AI-assisted software engineering practices, including code generation, automated testing, code review, and security validation.
- Work with **Terraform and Infrastructure as Code (IaC)** practices to support infrastructure configuration, environment consistency, and repeatable deployment processes.
- Support containerized application deployments using **Docker, Kubernetes, and CI/CD pipelines**, improving deployment reliability and application maintainability.
- Develop **Python automation scripts** to streamline repetitive data validation, application monitoring, troubleshooting, and operational support activities.
- Enhance application workflows through backend service improvements, process automation, and integration of business rules into existing enterprise systems.
- Implement secure application functionality using **Spring Security, OAuth2, JWT, role-based access control (RBAC), and secure API design principles**, supporting the protection of sensitive government information.

Centene Corporation, St louis, Missouri **Jan 2025 – Oct 2025**
Role: Java Full Stack Developer

Functional Role Details:

- Assisted in designing and implementing backend services using **Spring Boot, Spring Data JPA, and Hibernate**, supporting business logic, data validation, and integration with healthcare application components.
- Developed reusable React.js components and integrated frontend applications with RESTful APIs to improve user experience, application responsiveness, and maintainability.
- Worked with **PostgreSQL, MySQL, and SQL queries** to retrieve healthcare records, validate data consistency, troubleshoot database issues, and support application processing.
- Assisted in developing secure RESTful APIs for exchanging member eligibility, claims, and healthcare information between internal application services.
- Applied **data structures, algorithms, object-oriented programming, and software design patterns** to develop reusable application components and improve code quality.
- Supported cloud-based development environments using **AWS services**, including application hosting, storage, monitoring, and deployment-related activities.
- Gained exposure to **Docker, Kubernetes, and CI/CD pipelines**, supporting application builds, automated testing, and deployment processes.
- Developed Python-based automation utilities for repetitive data validation, test data preparation, and application support activities.
- Supported healthcare application security requirements using **OAuth2, JWT, authentication, authorization, and role-based access control (RBAC)** while following HIPAA-related data protection practices.
- Assisted in integrating internal and external healthcare APIs, including JSON payload validation, exception handling, API response mapping, and troubleshooting integration failures.
- Participated in debugging backend services by analyzing application logs, API responses, SQL queries, and application execution flows.

Mindtree, Pune, India **Aug 2021 – June 2023**
Role: Software Engineer

Functional Role Details:

- Designed and implemented backend services using **Spring Boot, Spring Data JPA, and Hibernate**, integrating business logic with relational databases and enterprise systems.
- Applied **data structures, algorithms, object-oriented programming, SOLID principles, and design patterns** to develop modular, reusable, and maintainable application components.
- Developed RESTful APIs to facilitate communication between frontend applications, backend services, and external enterprise systems.
- Worked with **Oracle, MySQL, and PostgreSQL databases**, developing SQL queries, stored procedures, and database operations to support business transactions and reporting.
- Implemented and enhanced **Redis caching mechanisms** to improve data retrieval efficiency and reduce repeated database queries.
- Supported enterprise application development involving HR, financial, and business process management workflows.
- Worked with **AWS EC2 and CloudFormation** to support application infrastructure, deployment configurations, and cloud-based development environments.
- Assisted in implementing asynchronous application workflows and backend integrations to support reliable processing between enterprise services.
- Supported application security through authentication, authorization, input validation, and secure REST API development practices.
- Participated in application performance optimization by investigating slow database queries, backend processing issues, and service integration failures.
- Developed and maintained automated test cases using **JUnit, Mockito, Selenium, and TestNG**, improving test coverage and supporting application reliability.
- Supported CI/CD activities using **Jenkins, Git, and automated build processes**, assisting with application packaging, testing, and deployment.

ECIL, Hyderabad, India **May 2017 – June 2018**
Role: Junior Engineer

Functional Role Details:

- Supported the testing and validation of electronic components, instrumentation, and system interfaces to verify functionality and operational reliability.
- Applied **analytical problem-solving, logical reasoning, and engineering fundamentals** to investigate technical faults and identify potential corrective actions.
- Assisted in reviewing technical specifications, engineering diagrams, system configurations, and operational documentation.
- Participated in hardware diagnostics and routine maintenance activities under the supervision of experienced engineers.
- Supported troubleshooting activities involving system connectivity, component behavior, and equipment performance.
- Assisted in recording test observations, technical defects, troubleshooting findings, and corrective actions for engineering documentation.
- Followed established engineering procedures, safety guidelines, and quality standards during system testing and maintenance activities.

EDUCATION:

- MS in Computer Science from University of Central Missouri

CERTIFICATIONS:

- AWS Certified Developer - Associate (DVA-C02) | Amazon Web Services
- Microsoft Certified: Azure Developer Associate (AZ-204) | Microsoft

PUBLICATION:

Title: Development and Performance Evaluation of NavIC-Based Reefer Monitoring System
Authors: Praneeth R, B. Sumanth Reddy, A. Supraja Reddy, K. Satyanarayana, V. Dileep Reddy
Published In: Advances in Signal Processing and Communication Engineering, Springer, July 2024
Abstract: Proposed a NavIC-based monitoring system to ensure real-time tracking of environmental conditions in refrigerated containers (reefers) for transporting temperature-sensitive goods. The system leverages NavIC for precise geolocation, enhancing logistics efficiency and reducing spoilage losses.
